

HPM<sup>®</sup> FOR PATIENT CARE/NURSING

## HPM® for care

HPM® – the intelligent digitalisation solution for safe and efficient collaboration between nursing/care, hygiene, medical technology and cleaning.

REAL TIME LOCATION SYSTEM  
+ HYGIENIE STATUS  
+ TECHNICAL STATUS  
OF MEDICAL DEVICES

### HPM® for patient care/nursing

Where is the nearest available patient bed or the nearest available alternating pressure mattress? Where is an ultrasound machine available for urgent use? Has the defective wheel on bed 956 been reported to the medical equipment department? In many hospitals, it is not possible to answer such questions quickly and precisely, which puts an additional burden on nursing staff. Digital solutions such as HPM® can provide efficient support.

#### Efficiency

Real-time location data on the usage of medical devices can be used to improve processes and capacity utilization.

#### Transparency

The exact location of medical devices can be viewed in real time, including hygiene and technical status information.

#### Digital germ and bacteria tracking

Hygiene status of patients can be assigned to medical devices which helps to assure that they are being adequately cleaned.

#### Workplace safety

Maximize staff safety by making the hygiene status of your medical devices transparent and by documenting cleaning processes in real time.

#### Occupancy management with real-time data

Clean beds can be found easily across the whole hospital which drastically reduces search effort for nurses and waiting time for patients.

#### Permanent training

By providing processing instructions tailored to the medical device and the contamination, staff receive ongoing training.
