

HPM<sup>®</sup>

PROCESS MANAGEMENT FOR HOSPITALS

Optimise your processes with HPM®

HPM® – the intelligent digitalisation solution for safe and efficient collaboration between nursing/care, hygiene, medical technology and cleaning.

REAL TIME LOCATION SYSTEM  
+ HYGIENE STATUS  
+ TECHNICAL STATUS  
OF MEDICAL DEVICES

## Utilise the benefits of real-time asset tracking for the management of medical devices and optimise your bed management processes.

CLINARIS GmbH in Garching (near Munich) has developed HPM®. HPM® is a digital solution, which combines location and status data of medical

devices to optimise cleaning, repair, maintenance attesting processes. In addition, HPM® shows the exact location, as well as the hygiene and technical status for all registered medical devices in real time. Furthermore the actual usage, maintenance and inspection dates are displayed. HPM® facilitates the work of nursing and medical technology staff, increases the availability of technical medical devices, reduces the need for expensive surplus stock of devices, improves hygiene processes and breaks infection chains. By documenting processing procedures in HPM®, the hospital's legal position in case of a claim can be improved (reversal of evidence).

### Transparency

The exact location of medical devices can be viewed in real time, including hygiene and technical status information.

### Documentation of cleaning

Digitally supported processes enable detailed documentation of the individual cleaning steps.

### Digital germ and bacteria tracking

Hygiene status of patients can be assigned to medical devices which helps to assure that they are being adequately cleaned.

### Workplace safety

Maximize staff safety by making the hygiene status of your medical devices transparent and by documenting cleaning processes in real time.

### Occupancy management with real-time data

Clean beds can be found easily across the whole hospital which drastically reduces search effort for nurses and waiting time for patients.

### Permanent training

By providing processing instructions tailored to the medical device and the contamination, staff receive ongoing training.
